

COOK ISLANDS STATISTICS OFFICE
GOVERNMENT OF THE COOK ISLANDS
STATISTICAL BULLETIN

Balance of Payments and IIP Statistics
2011 - 2017

Data in this release has been revised and updated since last published in December 2018. There has been a vast improvement to the Goods account in particular imports exempted from taxes and fees which was not captured in the normal customs transactions are now included. Earlier series of fish export have been corrected to include only residents' activity.

Highlights of the Cook Islands Balance of Payments:

- Current account balance resulted in a credit balance of \$41.2m in 2017. The rising tourist revenue (\$253.3m in 2017) is the major contributor to this surplus and offsetting the heavy trade deficits. Goods exports of \$14.7 million consist mainly of fuel supplied to visiting aircraft. The services credit totalled \$286.0m and debit \$108.8m.
- The primary income credit of \$31.5 million is mainly made up of investment income associated with interest earned on deposits and debt securities held overseas, fishing licences and fees for use of airspace. On the debit side, \$23.8m is largely in the form of reinvested earnings and dividends of foreign owned enterprises.
- Secondary income on the credit side is largely made up of official development assistance (ODA), of \$23.5m, other revenues \$13.4m is mainly from fishing fines and departure taxes paid by non-residents. Net insurance premiums \$8.7m make up the bulk of secondary income debit followed by \$4.0m of foreign workers' remittances transferred to families abroad.
- Capital account is essentially ODA financing infrastructure (capital) projects. The financial account shows a \$71.9m increase in financial assets and a small increase of \$2.5m in liabilities.
- Net errors and omissions data was reported at \$5.6 million in 2016 and \$0.1 million in 2017 recording a decrease from previous numbers of negative \$26.8 million for 2016 and negative \$32.9 million for 2017.

Explanatory Notes

The Balance of Payments (BOP) statistics consist of a series of accounts: goods, services, primary income, secondary income, capital and financial accounts. It summarizes international transactions that takes place between residents of the Cook Islands (people and local entities) and the rest of the world.

- Goods account (visible items) measures exports and imports on a free on board (f.o.b) basis at the port of export. These are visible goods measured through the Customs records.
- Services account called invisible items because services are not seen crossing the border. All types of services like services of shipping, banking, tourism, investment services and unilateral transfers are measured in services account.
- Primary Income account measures income earned by residents from non-residents and similarly earnings by non-residents from residents. Investment income is the major component consisting of income flows between direct investors in one country and direct investment enterprises in another country.
- Secondary income account measures income transfers, as distinct from earned income recorded in the primary income account, between CI residents and non-residents.
- Capital account measures capital transfers and the acquisition/disposal of non-produced, non-financial assets between residents of the Cook Islands and the rest of the world.
- Financial account records transactions involving Cook Islands claims on (assets), and liabilities to the rest of the world.

The International Investment Position (IIP) provides the measurement of the extent of foreign ownership while the Investment income account shows the return on that investment.

Data is currently produced in accordance with the sixth edition of the Balance of Payments and International Investment Position Manual.
